From incident reports to decisions people can inspect

A bilingual workspace for evidence, draft communication and human review.

Evidence → Assessment → Review

Keep facts, uncertainty and responsibility visible.
No automatic operational execution.

27f5ec9

Application code version
Submission materials

A risk signal is not a confirmed flight outcome

Teams must interpret incomplete or conflicting reports without turning uncertainty into a promise.

Fragmented evidence

Different report times, source reliability and historical comparisons.

Different audiences

Operations, airport coordination and passengers need different drafts.

Human responsibility

Safety, release, dispatch and publication decisions stay with authorized people.

IMPLEMENTED WORKFLOW

One record from evidence to later outcomes

English and Chinese • clickable citations • versioned history • JSON export and print

01 Record

Incident, reports, privacy review and source/time metadata

02 Analyze

Scoped history, deterministic policy, model explanation

03 Decide

Accept, modify, reject or leave Pending; retain full reasons

04 Revisit

Record outcomes later; reassess or edit; preserve revisions

Calculate constraints first. Generate prose second.

The model receives scoped evidence and policy results; validation cannot prove every sentence true.

Deterministic context

Current reports within ±30 minutes
Historical mean: up to 12 prior months
Source independence and stop conditions
Known evidence / metric identifiers

Model + bounded validation

DeepSeek Flash / high / Responses
Bilingual explanations and three drafts
JSON, evidence and constraint checks
One repair; visible failure or advisories

RECORDED REAL-MODEL EXAMPLE

Gusts + an expanding support shortage

UNSEEN02-en • fictional QING • scenario Day 42, 18:00 • unseen when tested

17:45 Gust report

Verified in the fictional log.
Separate weather origin.
15 minutes before scenario.

18:20 Support report

Shortage spreads to a second stand cluster.
20 minutes after scenario.

High + human review

Two independent signal types plus expanding impact.
No official flight delay.

Recorded result: one call • 100.62 s • CNY 0.176188 estimated • qualitative notes retained

Usable output and good reasoning are different

One bounded run per set; no claim of statistical superiority or hallucination-free behavior.

Measure	Supplied original	Supplied rerun	Unseen
Accepted model steps	32 / 32	32 / 32	21 / 22
Quality failures*	4 / 30	3 / 30	3 / 20 + 1 blocked
Steps needing repair	12 / 32	18 / 32	7 / 22
Median latency	67.741 s	81.907 s	69.273 s
Estimated cost, CNY	4.894533	5.553762	3.420530

*Quality denominator: final language variants; supplied sets include two privacy checks without model calls.
Model-step totals include baseline assessments. Cost uses app accounting, not provider invoices.

Preserved decisions—even when reassessment fails

Five synthetic records • all four dispositions • seven revisions • two later simulated outcomes

What was demonstrated

Original recommendations and reasons retained.
Later outcomes added without losing history.
Previous valid assessment preserved on error.

What was not demonstrated

The reassessment failed after one repair.
The repair invented a source identifier.
These are not real participant observations.

Traceability is demonstrated. Time savings are unmeasured.

The purpose is to make evidence and reviewer judgment easier to inspect.

Available evidence

Recorded model replies, quality reviews and costs.
351 automated tests; TypeScript + Webpack passed.

Accepted limitations

Unsupported commitments.
Historical interpretation errors.
Validator false positives.
Input privacy is heuristic.

Intentionally skipped

Manual timing study.
Basic-prompt comparison.
High-versus-max experiment.
Standalone B787 package.

A reviewable package before a supervised release

Eight required materials and the approved video are linked from the repository.

Review now

Editable presentation and technical report
Source, rules, tests and frozen evidence
Synthetic feedback and risk card
Approved video and source hashes

Before submission

Owner makes repository public
Verify links and submit repository URL
Rehearse; retain portal confirmation
Fresh judge install still unverified
